

Evidence 1: Waste Management

Therefore, our university has various waste management procedures. It is separated into 5 categories: water/ice, glasses/straws, plastic bottles, general waste, and food scraps. The cafeteria staff is responsible for taking garbage out of the bins and collecting it at the collection point for each type of garbage. They also arrange trash cans according to the trash type labels attached to the wall, including water/ice bins, Zero Waste Cup trash cans, plastic bottle trash cans, metal cans, other drinking glasses, general trash cans, and food scrap trash bins. This is in line with the best and most efficient solution to solid waste problems, namely reducing the amount of solid waste, separating waste, and reusing waste, respectively.
